PROFESSIONAL SUMMARY

DevOps & Cloud Engineer with hands-on experience building Kubernetes-based microservices environments, CI/CD pipelines, cloud infrastructure, monitoring, and auto-scaling using AWS, Azure, Docker, Kubernetes, Jenkins, GitHub Actions, Prometheus, and Grafana. Seeking an entry-level DevOps/Cloud Engineer role to apply automation and cloud engineering skills.

TECHNICAL SKILLS

- **Cloud:** AWS, Microsoft Azure
- **Containers & Orchestration:** Docker, Kubernetes
- **Infrastructure as Code & Configuration:** Terraform, Ansible
- **CI/CD & Automation:** Jenkins, GitHub Actions
- **Monitoring & Observability:** Prometheus, Grafana
- **Operating Systems & Scripting:** Linux, Bash
- **Networking:** TCP/IP, DNS, HTTP/HTTPS, SSH, ports
- **Version Control:** Git, GitHub

CERTIFICATIONS

- Microsoft Azure Administrator Associate (AZ-104) — In Progress

PROJECTS

Serverless Resume API | *Azure Functions, GitHub Actions, REST API*

- Built a serverless REST API on Azure Functions that returns resume data as JSON over HTTP, using serverless scaling to handle requests without managing servers.
- Automated build and deployment with a GitHub Actions workflow triggered on every push to main, using a Publish Profile stored in GitHub Secrets to authenticate to Azure.
- Resolved a GitHub Actions deployment failure caused by an SCM authentication error by enabling the required authentication setting in the Azure Function App.
- Configured CORS in Azure to allow the portfolio frontend's origin, fixing a cross-origin request block when calling the API from the browser.

Cloud-Native Microservices Observability & Auto-Scaling Platform | *Kubernetes (K3s), AWS EC2, Jenkins, Prometheus, Grafana, Docker, Helm*

- **Kubernetes Microservices Deployment:** Deployed Google's Online Boutique (11 microservices) on K3s running on AWS EC2, using Kubernetes to manage containerized services and service availability.
- **Pod-Level Auto-Scaling (HPA):** Configured Horizontal Pod Autoscaling (HPA) with an 80% CPU utilization target across key services, allowing Kubernetes to automatically adjust pod replicas based on resource utilization, validated using a load generator to simulate traffic.
- **Metrics & Visual Alerting:** Connected Prometheus as a Grafana data source and configured 3 alert rules — Frontend High CPU (>80% for 30s, validates HPA response), Microservice Down (any of 11 pods leaving Running state for 1 min), and EC2 Host High CPU (>80% for 1 min) — with automated email notifications.
- **Automated CI/CD Delivery:** Built a declarative Jenkins pipeline triggering automatic build, test, and rolling deployment on every code push, eliminating manual deployment steps across microservices.
- **Self-Healing & Reliability:** Automatically detected and restarted failed containers in under 5 seconds when manually killed, using Kubernetes' built-in self-healing.

EDUCATION

Bachelor of Science, Computer Science (BSc MECS) — B.R.R. & G.K.R. Chambers Degree & PG College, Palakollu

July 2025

DevOps Training Program — Xstream Tech, Hyderabad

Feb 2026 – Jul 2026

Hands-on practice across Docker, Kubernetes, Terraform, Ansible, AWS, Azure, Jenkins, Git, GitHub Actions, Prometheus, Grafana, Linux, Shell Scripting
